

# BellaForm™ Pontics

– the practical wax pontics for quick modelling

## Anatomically designed in 15 different shapes

- ◆ Ideal way of facilitating modelling work
- ◆ Time savings
- ◆ Simple handling and easy processing
- ◆ Anatomic design
- ◆ Individually adaptable
- ◆ Excellent aesthetics
- ◆ Optimum wax hardness for very good stability
- ◆ Practical starter set, refillable

## Working efficiently

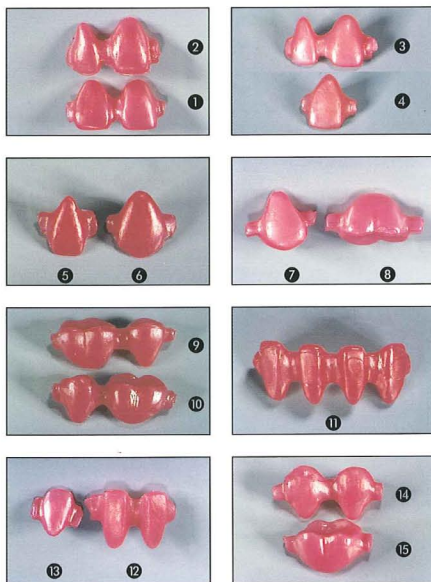

With BellaForm™ Pontics the modelling time of bridges is significantly shortened. The pontics are easy to process and suited for all modelling situations by virtue of their anatomic design with 15 different shapes. Since modelling can be carried out without a collar, so that no metal edges will be left. The evenly reduced wax shapes and the anatomical design ensure ideal conditions for the ceramic veneering.

## Working individually

By modifying the shapes, the prefabricated wax parts can be adapted to any individual shape. Interdental taper for perfect ceramic structuring and sufficient space for reinforcing connections with noble alloys and those with high palladium content are additional advantages. There is also adequate occlusal space for modelling anatomically functional chewing surfaces and for structuring the ceramics naturally.

The introductory set contains 20 pieces of each of the 15 shapes, neatly sorted. The refill packs can be obtained to keep the set complete at all times.
